

RÉSUMÉ

Dave Lewis

Technical Writer

SUMMARY

Technical writer with experience producing clear, accurate documentation for software products. Applies a technical aptitude to grasp new concepts and acquire new skills quickly. Proven track record in implementing and maintaining documentation single-sourcing systems that are reliable, flexible, and cost-effective.

EXPERIENCE

Senior Technical Writer

Jun 2024 - Apr 2026

Alida · Vancouver, BC · Hybrid

- Documented the company's first generative AI assistant and a new suite of modern reporting features, including weighting, significance testing, sentiment analysis, and choice-based conjoint analysis.
- Led the migration of all company documentation from standalone product-specific help sites to a unified set of articles in Zendesk Knowledge.
- Converted tools and processes from XMetaL Author to Oxygen XML Author for direct publishing to Zendesk.
- Built GitHub Actions-based workflows to stage documentation for review outside of Zendesk, to validate all DITA content using Schematron, and to manage Zendesk article redirects.

Technical Writer

Feb 2024 - Jun 2024

DTL Communications (Client: Telus International) · Vancouver, BC · Remote

- Researched and wrote technical evaluation and implementation documentation for Telus SmartHome+, targeting technical staff at prospective customer service providers.
- Documented the SmartHome+ architecture, which integrates smart home devices — including lights, voice assistants, cameras, and safety sensors — with Amazon Web Services (AWS) for authentication, device connectivity and controls, and AI-powered video processing.
- Reviewed, edited, and wrote developer documentation in the OpenAPI specification for the SmartHome+ API.

Senior Technical Writer

Nov 2020 - Oct 2023

Alida · Vancouver, BC · Hybrid

- Wrote documentation for administrators and research analysts across a full-featured analytics platform, enterprise administration features, and customer community engagement tools.
- Partnered with Product Management, Engineering, QA, and UX in an agile environment to ship documentation alongside feature releases for a globally distributed product team.

Senior Technical Writer

2017 - Nov 2020

ActiveState · Vancouver, BC

- Wrote end-user documentation for the ActiveState Platform and Komodo IDE. Generated and maintained documentation for ActiveState's open-source distributions of the Python, Perl, Tcl, Ruby, and Go programming languages.
- Overhauled existing documentation tools and processes. Replaced a homegrown system of custom scripts for each supported programming language with a standard approach for all ActiveState documentation. Implemented a new workflow with Markdown for content, the Hugo static site generator for templating and processing, and GitHub and AWS Amplify for continuous deployment and hosting.
- Supported Product Management, Customer Success, and other teams with data analytics to measure product usage. Also, maintained a visual dashboard with key company metrics.
- Served in a Product Management role on a project to migrate existing customers to the new ActiveState Platform.

Senior Technical Writer

2014 - 2016

NetApp · Vancouver, BC

- Wrote installation, administration, and API documentation for StorageGRID Webscale, a distributed, Linux-based, enterprise object storage application.
- Worked with a globally distributed team in an agile development environment to deliver comprehensive and accurate documentation to support semi-annual releases.
- Led the conversion of StorageGRID Webscale documentation set from unstructured FrameMaker to DITA to enable delivery to customers in multiple formats, and to conform to corporate documentation guidelines.

Senior Technical Writer

May 2007 - Apr 2014

ACL · Vancouver, BC

- Worked closely with developers, QA, UX designers, and product managers to produce accurate and usable end-user, administrator, installation, and API documentation.
- Planned and authored documentation for the initial release of the ACL GRC cloud application. Provided ongoing documentation updates to support the continuous deployment development process.
- Gained extensive product knowledge across the suite of ACL products, which included desktop applications, enterprise server applications, and cloud applications. Regarded as a subject matter expert for the installation and administration of ACL Analytics Exchange, the company's enterprise product.
- Led the adoption of DITA as the documentation standard at ACL. Selected and implemented the single-sourcing tools used for all documentation authoring and production, which resulted in increased team productivity, significantly reduced localization costs, and faster release delivery timelines for documentation delivered in multiple formats in up to nine languages.

Technical Writer

2003 – 2007

FDM Software · Greater Vancouver Area

- Wrote end-user, administrator, and implementation documentation for the FDM product suite, which included complex records management and computer-aided dispatch enterprise applications for public safety organizations (Fire and EMS).
 - Led the adoption of DocBook as the documentation standard at FDM to streamline production for print, HTML help, and web delivery. Selected and implemented the single-sourcing tools used for all documentation authoring and production, and converted existing content.
 - Developed the company website in ASP.NET, and implemented updates and changes.
-

SKILLS

Authoring & Content

Oxygen XML Author
XMetaL Author
DITA XML Standard
Markdown
Adobe FrameMaker
Schematron
Figma
SnagIt

Publishing & Toolchain

DITA Open Toolkit (DITA-OT)
Zendesk Knowledge
GitHub Actions
CI/CD Pipelines
Hugo
Docusaurus
Redoc
XSLT

Development & Analysis

Python
HTML / CSS / JavaScript
Claude Code
SQL
Git / GitHub
OpenAPI / Swagger
Docker
Jira & Confluence

EDUCATION

Bachelor of Arts (B.A.), English

1997–2000

Simon Fraser University · Burnaby, British Columbia
